

CUSTOMER-SPECIFIC APQP REQUIREMENTS

Ford | GM | Stellantis | Toyota | Honda | Maruti Suzuki | Tata Motors | M&M; | Quality Head Agents

PURPOSE

While AIAG APQP provides the universal framework, each major OEM has additional customer-specific requirements (CSRs) that suppliers must comply with. This guide summarizes key CSR requirements for major automotive customers.

FORD MOTOR COMPANY

Ford uses the APQP Status Report (Red-Amber-Green) system and requires suppliers to report APQP status monthly in the Ford Supplier Portal.

- Ford APQP requires RAG (Red-Amber-Green) status reporting for each deliverable
- Ford uses 'APQP Checklist' specific to Ford with additional Ford-specific deliverables
- Suppliers must use the Ford Supplier Portal (FSP) for APQP status reporting
- Ford requires 'Ford-specific PPAP' with additional documentation beyond standard AIAG
- Special characteristics use Ford symbols: CC (Critical Characteristic) and SC (Significant Characteristic)
- Ford requires PFMEA to be aligned with AIAG/VDA 2019 format
- Ford Customer Specific Requirements (CSRs) available at: ford.com/qualitysupplier

GENERAL MOTORS (GM)

GM uses the BIQS (Built In Quality Supply) system which is tied to APQP milestones and supplier quality performance.

- GM requires BIQS (Built In Quality Supply) scoring linked to APQP milestones
- GM uses the 'GP-5' supplier quality standard aligned with IATF 16949
- GM requires PFMEA in AIAG-VDA 2019 format — Action Priority (AP) instead of RPN
- GM Specific Requirements: 'PPAP Requirements' per GP-9
- GM uses KCC (Key Control Characteristics) and CC (Critical Characteristics)
- APQP status reporting through GM's Supplier Quality Interaction (SQI) portal
- Deviation permits and engineering change notifications through GM's change management system

STELLANTIS (FCA)

Stellantis uses the FASTCAR (Fast Action to Supplier Technology Change Assessment and Resolution) system.

- Stellantis uses FASTCAR portal for APQP tracking and PPAP submission
- Stellantis requires 'CS-9' (Customer Specific Requirements) compliance
- Special characteristics: CCS (Critical Characteristics — Safety) and HI (High Impact)
- Stellantis requires PFMEA per AIAG-VDA 2019 format
- APQP timing and milestones submitted via Stellantis Supplier Portal
- Stellantis requires Stellantis-specific run@rate confirmation (production capacity verification)
- Engineering change management via Stellantis PDT (Product Development Tool)

TOYOTA / TOYOTA GROUP

Toyota uses a principles-based approach aligned with Toyota Production System (TPS) and requires robust PFMEA and control plans.

- Toyota requires PFMEA to include poka-yoke for each failure mode
- Toyota uses 'Four M Change Point' management — Man, Machine, Material, Method
- Toyota PPAP requires 'Toyota Production Part Approval Report' format

- Special characteristics: SC (Safety) and CC (Critical) per Toyota standards
- Toyota requires 'Genchi Genbutsu' (go and see) validation at supplier facility
- Control plans must show 'reaction plans' for every special characteristic
- Toyota supplier APQP status reviewed in quarterly supplier meetings

HONDA

Honda uses a supplier development approach and requires APQP documentation aligned with Honda-specific standards.

- Honda requires 'Honda PPAP' format with Honda-specific cover sheet
- Honda uses H-SES (Honda Supplier Excellence Standards) aligned with IATF 16949
- Special characteristics use Honda symbols: S/C (Safety Characteristic)
- Honda requires 'Initial Mass Production Report' at launch
- Honda APQP monitoring via Honda Supplier Quality Management (SQM) system
- Honda requires risk assessment using Honda Risk Priority Matrix

MARUTI SUZUKI INDIA

Maruti Suzuki uses QSTP (Quality Standardization and Technology Planning) process aligned with Suzuki Motor Corporation standards.

- Maruti requires QSTP (Quality Standardization and Technology Planning) documentation
- Maruti uses 4M (Man, Machine, Method, Material) change management
- Maruti PPAP requires 'Maruti Initial Part Approval' format
- Special characteristics: 'A' and 'B' classification system
- Maruti Supplier Evaluation using VASUP (Vendor Assessment for Supplier Upgrading Program)
- Annual Maruti supplier audit includes APQP effectiveness review
- Maruti requires 'Pre-Mass Production Meeting' (PMM) before SOP

TATA MOTORS

Tata Motors uses QA-SOP (Quality Assurance Standard Operating Procedures) aligned with IATF 16949.

- Tata Motors requires APQP aligned with AIAG APQP framework
- Tata uses 'Gate Approval System' similar to AIAG Gate Reviews
- Tata PPAP requires 'Tata First Article Inspection Report' (FAIR)
- Special characteristics identified as Critical-to-Quality (CTQ) and Critical-to-Safety (CTS)
- Tata requires 'Tata Supplier Quality Assessment' (TSQA) before program award
- Annual Tata Motors supplier audit covers APQP compliance

MAHINDRA & MAHINDRA

M&M; follows Mahindra Quality Management System (MQMS) aligned with IATF 16949 and AIAG APQP.

- M&M; requires APQP compliance per MQMS (Mahindra Quality Management System)
- M&M; uses 'APQP Gate Review' process with M&M-specific; gate checklists
- M&M; PPAP follows AIAG PPAP format with M&M; specific additions
- Special characteristics: CC (Critical Characteristic) and SC (Significant Characteristic)
- M&M; Supplier Development team conducts APQP monitoring visits
- Annual supplier conference includes APQP best practice sharing

IMPORTANT: Always download the latest Customer-Specific Requirements (CSRs) from the IATF CSR website: www.iatfglobaloversight.org/csrs/ — CSRs are updated frequently.
