

Control Plan Training Guide - AIAG First Edition

Complete Learning Path | Quality Head Agents

Module 1: What is a Control Plan (1 hour)

Purpose and history of Control Plan in automotive quality. Relationship to PPAP - CP is Element 14 of PPAP 18 elements. Three types: Prototype, Pre-Launch, Production. Difference from Work Instructions. IATF 16949 Clause 8.5.1 and 8.5.1.1 requirements. Who owns the Control Plan.

Module 2: CP Structure Column by Column (2 hours)

Walk through all 13 columns with examples. Product vs Process characteristics. Special characteristics CC and SC - identification and control requirements. Sample size and frequency - how to decide. Control method options - SPC, 100%, attribute, poka-yoke. Writing good reaction plans.

Module 3: Three-Way Linkage - PFD, PFMEA, CP (2 hours)

How PFD feeds the PFMEA and how PFMEA feeds the CP. Mapping exercise: given a PFD, build PFMEA row, build CP row. Common mistakes in linkage. What IATF auditors look for in linkage audit. Practical exercise: audit an existing CP for linkage gaps.

Module 4: CC and SC Controls (1.5 hours)

CC: what makes a characteristic critical. Why 100% inspection or poka-yoke is required. Validating poka-yoke effectiveness. SC: appropriate control methods. Customer-specific requirements: Ford, GM, Stellantis, Toyota. Drawing bubble symbols and their meaning.

Module 5: Live CP Exercise + Audit Simulation (2 hours)

Team exercise: build Control Plan from real PFD and PFMEA. Review and critique each other's Control Plans. Simulate auditor questioning: can you explain your reaction plan? Auditor checklist - self-assessment before IATF audit. Take home: 15-point CP self-audit checklist.
